

Control Desk CU 2DV

With the CU 2DV control table, you have everything under control from a safe distance. Move crashed vehicles precisely and easily from one point without entering the danger zone. Thanks to separate conveyor flows, you can approach each cylinder individually or in combination. One oil flow is available per cylinder. In this way, you control with absolute precision and sensitivity. Safe, synchronized lifting of the load is possible without unintentional compensating movements. You can choose between rerailing with 2 cylinders (small rerailing system) or 4 cylinders (large rerailing system).

Technical Data

Dimensions set up:	999 x 618 x 1153 mm
Dimensions folded:	932 x 618 x 495 mm
Operating Pressure:	53 MPa
Hydraulic connection:	QD-coupling NW 06
Weight:	47,5 kg
Control valve:	Lifting: 2, Shifting/Lifting: 1, Locking/Lifting: 1
Ambient Temperature:	-20 bis +55°C
