

STANDARD RAM - LARGE

The single-stage standard ram series is completely matched to each other with sizes and extension lengths. The smaller ram creates an opening into which the next larger ram is then inserted. The R 414 has an extended length of 1600 mm. This means a minimum overall height with comparatively large stroke. The claws can be rotated through 360°. Sensitive operation of the star grip is possible without twisting the wrist. The easy-grip claws on the piston rod and in the cylinder base provide a secure grip on sloping and smooth surfaces.

Technical Data

Dimensions:	900 x 95 x 174 mm
Extended length:	1600 mm
EN-Classification:	R 124/700-24,2
Retracted length:	900 mm
Lifting force:	124 kN
Piston stroke:	700 mm
Weight:	24,2 kg
Series:	Tubular
Type:	single stage
Oil requirement:	1110 cm ³
