

LIFT IT UP!

In addition to our rescue equipment, rerailing technology is another product line that we have been manufacturing and selling at LUKAS for many years. Our newly developed **LX LIFT** now brings both areas together and provides support in a variety of operational situations when, in addition to the cutter and spreader, cylinders are also needed to lift heavy loads. Our LUKAS telescopic cylinders have a large lifting range and a very low overall height. A wide range of models with different heights, strokes and lifting forces make them suitable for a variety of applications (traffic accidents, railway accidents, building collapses).

The **LX LIFT** enables you to extend the telescopic cylinders, which are connected by hose lines, without having to enter the danger zone yourself. Our **LX LIFT** can be operated with all LUKAS hydraulic units.

Technical Data

Dimensions:	234 x381x307 mm (ready for use), 234x381x191 mm (rods on base plate)
Operation pressure:	53 MPa
Hydraulic connections:	1 x MONO nipple (input), 2 x plug-in coupling (output)
Weight:	11,5 kg
Lifting control valve:	2 pieces
